

Centralized Risk Assessment for Decentralized Security Organizations

Resilience Arc gives parent companies the data they need to manage risk and provides child entities the tools to stop losses before they happen.

The annual risk assessment process is time-consuming, static, and fragmented, especially for multi-entity organizations. Security and risk leaders need ongoing visibility and a solution with the depth to support business decisions and reduce risk across the portfolio.

Move beyond point-in-time checklists with automated, ongoing, multi-entity insights by:

Automate your Risk Assessments for each entity

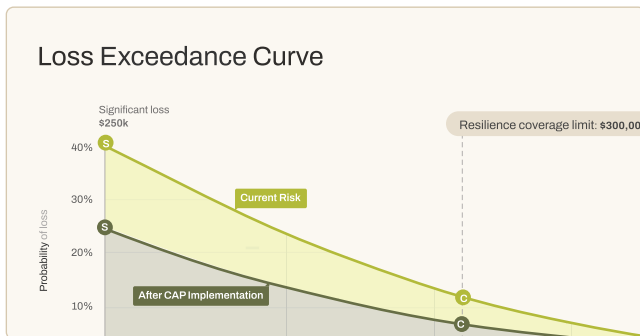

Replaces fragmented, manual assessments with dynamic, standardized evaluations, cutting effort by up to 80% and giving CISOs consistent insights across the portfolio.

Identify the level of criticality with a quantified, stack-ranked comparison

Prioritize entity risks by financial exposure to spotlight those most likely to cause material loss or exceed insurance limits, enabling focused mitigation and executive-level investment justification.

Identify Top Risks

Organizations with highest chance of exceeding insurance limit			Organizations with the most financial exposure	
Organization	Chance of Exceeding Limit	Cyber Insurance Limit	Organization	Value at Risk
Pest Control Company	1%	\$7M	Pest Control Company	\$27.6M
Machining Company	3%	\$3M	Machining Company	\$16.9M
Veterinary Company	3%	\$2M	Veterinary Company	\$14.8M
Chemical Company	2%	\$1M	Chemical Company	\$9.4M

Inform financial decisions with an aggregated view of total risk in dollars and cents

Provide CISOs with total portfolio risk insights that guide capital planning with CFOs, align insurance strategy, and report out top-level risk posture to the board.

Protect your entities with Ongoing Exposure Monitoring provided by our award-winning Risk Operations Center.

Complement enterprise risk management strategies by providing tailored exposure monitoring across all entities.

The Accountability v. Responsibility Gap

The Risk of Growing Fast as a Complex, Multi-Entity Org →

When you expand through M&A or diversified holdings you face a dangerous paradox: you own the financial fallout of a breach, but your entities own the data. This is the Accountability Gap.

Arc gives the parent organization full visibility into these entities. To close the accountability gap, every child entity is equipped with Edge, a platform tailored to solve each entity’s specific security challenges—powered by claims data.

Data is the real differentiator for Resilience

Resilience is the cyber risk management company built to help you reduce your risk. Resilience Arc gives you clarity through:

Real-World Intelligence

We start with years of anonymized cyber insurance claims data. We know exactly what causes companies to lose money.

Personalized Context

We enhance that global loss data with your organization’s actual financial and technical signals.

Evidence-Based Action

We move away from static checklists to a live view of your exposure, showing exactly where your value is at risk.

Arc lets you grow as fast as you want without the growth tax of unmanaged risk.

Trusted by Security Leaders:

Before, we relied on internal audits or our MSSP for risk assessments; both were point-in-time evaluations, maybe once a year. With Resilience Arc, I can log in any time, make updates, and immediately see the impact of changes or new controls. It’s continuous, real-time feedback that makes a huge difference in how we manage and improve security maturity.
